Sample

For each delivery vehicle, fill in items to .
Please submit within five working days after the end of the month.

Sample CO₂ calculation for a single truck.
 Amount of fuel used (L) and distance traveled (Km) values represented as four significant digits.
 Amount of CO₂ generated = amount of fuel used (L) x conversion factor (2.62 kg/L for diesel)
 = Monthly distance traveled (km) / monthly mileage (km/L) x conversion factor
